

MONEYMINT TRADE ASSIST PANEL FUNCTIONALITY

- Draggable on the chart
- Panel will remember last used settings
- Heart will save your favorite settings
- Down Arrow will load saved settings
- Up Triangle will minimize the panel
- X will remove the panel from the chart

- LOT size calculator
 - Calculated based on the asset and the Stop Loss (SL) set

- This is the time that will control any scheduled trades, it is programmed to work on the same time as you and what your computer is set. If you are using a VPS it will be using the time wherever the host is located.

• Lot Sizing automatically

Fixed Lot: 1.00

Fixed Lot
 Risk Percent
 Money

o Choose from

- **Fixed Lot** - where you determine the lots size.
- **Risk Percent** – based on the size of your account and your SL set, this will automatically calculate the lot size below. **SL MUST BE SET**
- **Money** – the exact money you want to risk based on your SL set and will automatically calculate the lot size needed. This will be calculated in your currency used in the terminal. **SL MUST BE SET**

• SELL

- o Will place a market sell order with the parameters set above in the panel
- o The number is the Bid Price

• BUY

- o Will place a market buy order with the parameters set above in the panel
- o The number is the Ask Price

• Spread calculated in the middle

• **Break Even**

- BE - Leaving the first input window 0 will move the stop to 0+commission above your entry price. Putting a number in the first input with calculate how many dollars/pips above entry plus commission you want the stop to be moved.
- If the second input window or both are left zero It will not trigger the BE
- The second input window is for you to determine when the stop is moved to BE, in either money or pips
- In this example it will trigger the SL to be moved after 1000 pips to \$5 + commission

Pips

Pips

Money

• **Trail Stop**

- Functions in the same way above just adding a trail stop instead of moving the SL to BE

• **Place Order**

- Instant – Will place the order now
- Schedule – up to 3 trades following the time at the bottom of the panel
- Pip Distance/Exact Price – away from current price or at set price
- Type of order

• Stop Loss

SL Pips: 2000

SL Pips
 HiLo
 SL Exact Price

○ Choose From

- **Pips** – set you stoploss in pip/points based on what the chart is measuring
- **HiLo** – this will set you SL to the high or low of the previous X amount of candles you determine and it is based on the timeframe you are on. High or Low is based on the direction of the trade
- **Exact Price** – set the SL at the exact price you want it

- **2 way** – with this box unchecked the panel will not allow you to hedge and place a trade in both directions. Checked, it will allow you to place trades in both directions.
- **OCO** – Order Cancels Order, when you have a Buy/Sell pending order, when this box is checked, once once side is filled the other side of the order will be canceled. Left unchecked, it will remain a pending order.
- **Cancel Pending (Min)**
 - This will cancel any pending order if not filled in X minutes

• Take Profit

TP Pips

TP SL Ratio

TP Exact Price

- **Pips** – set the TP in pip
- **TP/SL Ratio** – this will set you TP in a X to 1 ratio of your SL. Example, 2 will double your TP from your SL, and 3 will triple the distance
- **Exact Price** – set the exact price you want

• TP123

- Calculated in Pips, Money or Exact Price indicated with the buttons above. **These button only control TP123**
- If you want to set a TP1, TP2 and TP3 then you would leave the **above TP section set to ZERO**
- If you only want two TP's leave the 3rd plank
- If 3 chosen it will close 1/3 of the trade at the first level, another 1/3 when the second level is hit and the remaining 1/3 to close out the trade
- If you only input TP1 and TP2 it will close 1/2 at the first level and the remaining 1/2 at the final level to close out the trade

- Stop Options
 - Convert to Trail Stop
 - Convert to a TS at X % of the TP
 - Check the box to remove the TP
 - Move Take Profit
 - At X % of the Take Profit
 - Move Stop Loss
 - At X % of the Take Profit
- Choose to EITHER move or convert

• **Instant Close Features**

- Controls orders for this chart/asset
- **Market** will close all open trades
- **Profit** will close all trades with profit only
- **Loss** will close all trades with a loss only
- **Pending** closes all pending orders not filled
- **Close ¼, ⅓, ½** will close for example ¼ of the lots held and will round up to the closest increment. Pressing ½ again will close ½ of the remaining lots, rounded up. If you do not have enough lots to divide, it will do nothing
- Reverse will immediately close and open positions and will then open the exact position sizing, with its settings in the opposite direction.
 - Note, for example if your position is set to have a trailing stop triggered at 1000 pips, and you reverse the trade, it will place a trade in the opposite direction that will trigger a trail at 1000 pips. HOWEVER, if the trail has already triggered, it will place the opposite trade with the trail. So rule of thumb reverse as is on the chart.
